Three separate activities: problem definition, development of alternatives, and evaluation. Problem Definition Alternatives Evaluation Don't define problems as solutions; i.e. build a better mousetrap. Sun, 11 Nov 2018 11:52:00 GMT BASICS OF PROBLEM DEFINITION - predictive model looks like, what it can be used for, the assumptions necessary to use the model, a process to follow to create it (including step by step instructions is you are using Excel 2007), an Tue, 13 Nov 2018 21:29:00 GMT Using Excel to Solve Business Problems - AI Applications - Network Models 8 There are several kinds of linear-programming models that exhibit a special structure that can be exploited in the construction of efficient

algorithms for their solution. Tue, 13 Nov 2018 05:01:00 GMT Network Models 8 - MIT - 3.5 Gaussian Models The Gaussian models are of the form $\hat{\theta} = \tilde{Z} \delta$ 2 commonly used: probability and statistics to represent populations that are normally distributed. The graph of a Gaussian model is called a bell-shaped curve. 3.5 EXPONENTIAL AND LOGARITHMIC MODELS - Modeling problems are entirely different than the types of word problems most of us encountered in math classes. In order to understand the difference between math modeling and word problems, consider the following questions about recycling. 1. The population of Yourtown is 20,000, and 35% of its citizens recycle their plastic water bottles.
